

MAKE A WEBSITE TODAY WITH AI

Your take-home checklist. Tick each box as you go, today and at home.

☐ 00

Make a folder called **My Website** on your computer (Desktop is easiest). Everything you collect goes here.

My site idea (who + what they should do) _____

Scan for
the slides

MOVE 1 COLLECT Steps 1–4 Images, animations, colors and your section order.

Move done ☐

☐ 01

Find inspiration images — pinterest.com

Search for sites like yours. Save 2 or 3 screenshots of looks you love in **My Website**.

- ▶ Search your topic plus “website”, like “food cart website”. Look for layout, mood and fonts.
- ▶ Screenshot: Mac **Cmd + Shift + 4**, Windows **Win + Shift + S**. Anything you like elsewhere counts, too.

☐ 02

Find inspiration animations — originkit.dev

Save links to 1 or 2 animated pieces you love. Note the section each one goes in.

- ▶ Open a piece and copy the link from the address bar. Browse hero, buttons, cards, text effects.
- ▶ One wow moment for the **Hero**, maybe one more. Two great animations beat ten busy ones.

Effect 1 name _____ **Section** _____ **Effect 2 name** _____ **Section** _____

☐ 03

Pick a color palette — colorhunt.co

Choose one 4-color palette and copy its four hex codes into your notes.

- ▶ Browse **Popular**, or search a mood: pastel, warm, dark, retro.
- ▶ Click a color to copy its code, like #009A9D. Easy mix: one dark, one light, two accents.

1 # _____ **2 #** _____ **3 #** _____ **4 #** _____ **Mood** _____

☐ 04

Plan your sections

List your sections from top to bottom (the ideas for each go in your notes).

- ▶ **Navbar** first (logo and links), then **Hero** (headline and button). **Footer** always last.
- ▶ In between, 3 or more: About, Services, Gallery, Reviews, Contact. Idea: “three cards with photos”.

1 Navbar _____ **2 Hero** _____ **3** _____

4 _____ **5** _____ **Last Footer** _____

MOVE 2 PROMPT Steps 5–6 Turn your notes into one clear design spec.

Move done ☐

☐ 05

Write your design spec

Copy it from the slides (QR at the top) or type it. Fill all five {BLANKS} from your notes above (site idea, sections, colors + mood, section + OriginKit link).

Build a single-page, static website for... {EXPLAIN WEBSITE USE IN YOUR OWN WORDS}

The section and layout are... {INSERT MOCKUP SECTION ORDER AND IDEAS}

Use these colors and mood... {PASTE YOUR 4 COLOR CODES AND A MOOD}

Extract and implement this element in the {DESIRED} section {PASTE LINK FROM OriginKit}

- ▶ Two animations? Repeat the last line once for each. Each line gets its own section and link.
- ▶ Paste it into a new note (Notes, TextEdit or Word), fill it in, save it as **my-spec** in **My Website**.

☐ 06

Enhance it on Bolt — bolt.new

Create a free account, paste your spec, click + then **Enhance prompt**.

- ▶ Copy the enhanced text into **My Website** before you send. That’s your master prompt.
- ▶ Then press send and keep what Bolt builds: **draft 1** of your five.

- ☐ 07 **Generate four more drafts** — arena.ai · stitch.withgoogle.com
 Paste your master prompt into arena.ai (drafts 2 and 3) and Google Stitch (4 and 5).
 ▶ arena.ai: mode menu → **Side by side**. Model A **gemini-3.8-flash-high** · Model B **Claude-sonnet-5-high**.
 ▶ **Stitch**: sign in with Google, paste and generate. Then ask for a dark version:
 Make a second version of this design with a dark theme. Keep the same sections, layout and content, and adjust the colors so the text stays easy to read.
 ▶ Preview both Stitch versions and ask for changes before you export.
- ☐ 08 **Pick one. Download it.**
 Choose the draft that feels most like you. Save its code in **My Website**.
 ▶ Best start, not perfect. Check it in a phone-sized window, then look for **Download, Export** or **Code**.
 ▶ Got a zip? Unzip it in **My Website** (Mac: double-click; Windows: right-click → **Extract All**).
My favorite ☐ 1 Bolt ☐ 2 arena A ☐ 3 arena B ☐ 4 Stitch ☐ 5 Stitch dark
- ☐ 09 **Open it in Claude** — claude.ai/download
 Open the **Claude desktop app** (recommended) or claude.ai → **Code** tab → choose **My Website**.
 ▶ Claude reads your file, makes changes and opens the site in your browser. You approve as you go.
 ▶ Stuck? Ask Claude in a normal chat: “Help me open this folder.”
- ☐ 10 **Say the starter prompt**
 Copy it from the slides (QR at the bottom) or type it word for word. Then press Enter.
 This is my first time creating a website. Help me polish and finish the website design. I downloaded this from an online tool and would like to work on it locally until we have a final version. Familiarize yourself with the file, open it for me locally so I can see the changes, and let's work section by section from top to bottom, including the elements and anchor links. This is a single page website, static. Guide me through all this process.
 ▶ Go section by section, top to bottom. Ask yourself: “Does this look like what we wanted?”

- ☐ 11 **Go live** — pages.github.com · cloudflare.com · godaddy.com
 Ask Claude to publish it free on GitHub Pages. You get a link like `yourname.github.io/my-website`.
 Publish the website in this folder to GitHub Pages. If I don't have a GitHub account yet, walk me through creating one first. Then create a public repository, upload the files, turn on GitHub Pages and give me the live link.
 ▶ Send it in Claude's **Code** tab, with **My Website** still open. By hand: new repository → upload the files (main file = index.html) → Settings → Pages → Branch: main → Save.
 ▶ Own name? **Cloudflare** or **GoDaddy**. **.site**, **.xyz**, **.party** or **.science** can beat .com (check renewal). Then:
 Connect my domain `yourname.site` to my GitHub Pages website. Do it for me if you can, or walk me through each step.
 ▶ Swap **yourname.site** for your domain. Then turn on **Enforce HTTPS** in GitHub Pages settings.

My live link _____ **My domain idea** _____

KEEP IT PRIVATE

No home address, personal phone, personal email or other personal data on the site.

SHARE YOUR SITE

Send your live link to Ian Ramírez Rivera on work chat or work email. It joins the team gallery.
